PROFESSIONAL SUMMARY

Informatics Engineering graduate with solid expertise in full-stack software development, specializing in scalable backend systems, RESTful API design, and relational database optimization (MySQL/PostgreSQL). Proficient in modern frameworks, containerized environments (Docker), and clean architecture principles. Experienced in mobile application development, data engineering (ETL processes), and deploying AI/ML models using TensorFlow or PyTorch for real-world applications.

TECHNICAL SKILLS

Programming: Java, Kotlin, PHP, JavaScript, Python

Frameworks/Tools: Next.js, Laravel, Spring Boot, Docker, Git

Databases: MySQL, PostgreSQL

Other: Android Development, ETL Systems, MS Office

WORK EXPERIENCE

PT Bank Tabungan Negara - Jakarta, Indonesia

Dec 2025 - Present

Information Technology Support Intern (On-Site)

- Designed and developed automated test scripts for mobile applications using Katalon Studio and Appium to ensure functional accuracy and application stability.
- Executed functional testing, regression testing, and end-to-end testing on the Bale by BTN mobile application across multiple test scenarios and user flows.
- Created and maintained test cases, test plans, and test scenarios based on business requirements and banking system specifications.

PT Bank Sumsel Babel - Palembang, Indonesia

July 2023 - Aug 2023

Information Technology Intern (On-Site)

- Developed a fullstack digital document platform for the HR division, enabling secure file storage and improving document management workflows and data accessibility.
- Supported the analysis and development of LMS and KPI systems to enhance learning effectiveness, performance tracking, and data-driven decision-making.
- Collaborated with the IT team to perform scheduled system audits and routine maintenance, ensuring system reliability, performance stability, and operational compliance.

PROJECT EXPERIENCE

Brain Tumor Classification Based on MRI Images Using CNN VGG-16 Architecture

Sep 2024 - Mar 2025

<https://github.com/Farhanugraha/Brain-Tumor-Detection-Using-CNN-VGG-16>

<https://colab.research.google.com/drive/1zXcinLRx04fyxVmEj2BajoVQtteKBS0i?usp=sharing>

This project focuses on classifying brain tumors using MRI images to support early and accurate diagnosis.

- Utilized a Convolutional Neural Network (CNN) based on the VGG-16 architecture.
- Trained the model on a dataset of 3,000+ MRI images containing normal and tumor cases.
- Achieved 99% training accuracy, indicating strong model performance during training.

Mobile-Based Apps DeepCare: AI-Powered Medical App

Sep 2023 - Dec 2023

<https://github.com/Farhanugraha/Deep-Care---AI-Powered-Application>

Developed an Android application that supports ICU clinical decision-making through AI-driven predictions. The system processes multiple clinical inputs to help medical professionals assess patient conditions more effectively.

- Provided AI-based predictions including mortality risk, length of stay, readmission probability, and medical timestamps.
- Trained predictive models using structured tabular clinical data for accurate, data-driven insights.
- Achieved up to 72% accuracy in predicting ICU patient outcomes.

EDUCATION

Universitas Sriwijaya - Palembang, Indonesia

Bachelor of Informatics Engineering | GPA 3.94/4.00

- Graduated with Cumlaude in 3 years 10 months.
- Final thesis: Brain Tumor Classification using CNN VGG-16, achieved 99% accuracy.
- Coding mentor for first-year students, teaching Java, OOP, and Data Structures.
- MBKM – Bangkit Academy (Mobile Development – Android Path).

NON-FORMAL EDUCATION

Aug 2021 - May 2025

Bangkit Academy led by Google, GoTo, & Traveloka - Jakarta, Indonesia

Mobile Development (Remote)

- Gained practical experience in designing and developing Android applications using Kotlin, Jetpack Compose, and Firebase, applying MVVM architecture to ensure scalability and maintainability.
- Worked as the Mobile Developer in a cross-functional capstone team, collaborating with Machine Learning and Cloud Computing members to build DeepCare, an AI-powered healthcare application.
- Developed core application features using modern Android libraries such as Room, Retrofit, and Navigation Components, integrating ML predictions that achieved 72% accuracy for ICU patient outcome estimation.

Aug 2023 - Jan 2024

ORGANIZATIONAL EXPERIENCE

HMIF (Himpunan Mahasiswa Informatika) - Palembang, Indonesia

Jan 2023 - Dec 2023

Information Technology Staff

- Mentored 30+ new students by teaching foundational programming and data structures in Java through structured learning sessions.
- Collaborated with the team to develop the organization's portfolio website and an online aspiration form to improve member engagement and transparency.
- Served as a committee member for IF Code League (bi-monthly), responsible for creating and reviewing competitive programming problems.

CERTIFICATIONS

- Dicoding Android Jetpack Compose, Cred ID 2VX368LN3XYQ
- Dicoding Android Intermediate Level, Cred ID 2VX367K6QXYQ
- Dicoding Android Fundamental, Cred ID L4PQ8E3E7ZO1
- Dicoding Android Beginner, Cred ID L4PQ8MWK4ZO1
- Dicoding Kotlin Programmng, Cred ID 6RPNWLQL5P2M
- Dicoding SOLID Programming, Cred ID 1RXY0QD99ZVM
- HackerRank Java Certification, Cred ID 9B7E4A85AEA8
- HackerRank ASDL Intermediate, Cred ID 375E69C10F6C
- HackerRank MySQL Certification, Cred ID D205943066BD
- HackerRank Python Certification, Cred ID 3F3B3C63684C

ADDITIONAL INFO

Soft Skills

Problem Solving, Analytical Thinking, Systems Thinking, Collaborative, Rapid Skill Acquisition.

Languages

Indonesian (Native Speaker), English (Professional Proficiency).
